

AQUAPLUS
MICRO-PERFORATED FILM

product	Aquaplus. micro-perforated film
types	A: black film - white pattern B: white film - black pattern
packaging unit	rolls, widths 500 - 1250 mm
material	Polythylene
thickness	40 µm
description	micro-perforated PE film with squared pattern

Micro-perforated film for covering capillary mats.

- Protects pots from dirt and algae
- Saves water from evaporating
- Keeps moist capillary mats from heavy cooling down
- Crops can supply autonomously with water without soaking in water because the water stays in the mat and is led from below through the microperforation into the pots on request. Without staying on the surface.
