

2- & 3-LAYERED IRRIGATION MAT:

AQUAFLOORA

AquaFloora optimizes the irrigation on your potting tables. Due to the seamless combination of highly capillary AquaFil-Mat and GroundCover you will benefit from:

- Extremely simple handling - both textile surfaces are permanently laminated and do not slip apart.
- A very smooth surface, which is easily and quickly cleaned – wiping or sweeping is completed in no time
- A wrinkle-free surface, which reduces puddles and associated evaporation

Our irrigation mat consists of:

Layer 1 (Surface): a lightproof and water permeable woven textile/ground cover for an easy handling and cleaning and also to protect the application from algae.

Layer 2: a non-woven light-weight but extremely absorbent capillary mat for a high water retention and even distribution

Our 3-layered irrigation mat also consists of:

Layer 3 (bottom): a PE-sheet for the best economy of water possible and therefore minimal water waste and most effective water usage

Depending on your water-holding capacity needs you can choose between two types of non-wovens:

- 200 g-Fabric - water-holding capacity of approx. 1 Liter - with AquaFil 120
- 300 g-Fabric - water-holding capacity of approx. 3 Liters - with AquaFil 200

Shippable Measurements:

We deliver roll-widths of 4.92 ft., 5.41 ft. and 6.56ft. meters. On request other widths can be delivered. The length of one roll is 164.04 ft.
